TITANIUM INTAKE PIPE TURBO SUCTION PIPE for FA20DIT

High flow, feather weight and super durable!

[TITANIUM INTAKE PIPE]

Titanium Intake Pipe is lighter and stronger comparing to the stock plastic pipe. Optimizes the air flow all the way from the turbo by eliminating those unnecessary steps and dents seen on the stock pipe. Titanium pipe also improves the appearance of the engine compartment.

Beautiful look of the titanium.

Smooth structure and optimized piping layout allows more air to get into the engine.

[TITANIUM TURBO SUCTION PIPE]

Increases the performance by eliminating the intake air resistance of the stock bellow hose.

Ref: Installed image

Smooth structure without the bellows.

ENGINE DYNO

The Titanium Suction Pipe reduces the air resistance to the turbo, and the Titanium Intake Pipe does after the turbo to the intercooler and they together increase both power and response. Synergistic effect when they are used together is significant as shown on the left graph.

SPEC

	MATERIAL	DIA
TITANIUM INTAKE PIPE	TITANIUM	φ 50.5-φ 70
TITANIUM TURBO SUCTION PIPE	TITANIUM	φ 70
