# ALTERNATOR PULLEY for 2JZ-GTE

## Prevent trouble caused by over-revving!

This product prevents overcharging at high engine speeds by the larger underdrive design. It also reduces the alternator's rotational speed, lowering the load on the engine and preventing potential failures at high RPM ranges.

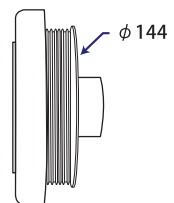

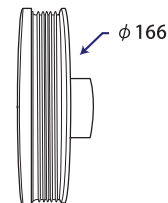

Compatible both with the factory STD and the ATI Super Damper Pulley for 2JZ36 kit.

### <Reference Values for STD / ATI Pulleys>

【ATI for stock stroke】

【ATI for 2JZ36 / STD】

- Material: Aluminum
- Surface finish: Hard anodized finish for improved wear resistance.

This product is designed to reduce the rotational speed of the alternator, which may result in a decrease in charging current. It is strongly recommended to check the charging log data both before and after installation. Always monitor the system for any abnormal signs, and discontinue use immediately if a drop in charging voltage is detected.

■ APPLICATION: 2JZ-GTE
