Ti RACING TITANIUM FRONT PIPE for RB26DETT

Ti RACING Titanium Muffler System

Titanium front pipe is now out!!

Durable, feather weight and amazingly high flow!

TOMEI Titanium Front Pipe is designed to optimize the exhaust flow especially at high RPM range by the best pipe layout while keeping the ground clearance which is a common problem with RB26 aftermarket front pipes on the market. High quality, high strength titanium material allows not just the thinnest wall structure and amazing weight reduction but also great durability at the same time.

This all titanium front pipe provides a significant improvement especially for vehicles with the factory stock or even the thin-piped aftermarket front pipe which was popular back when RB26DETT came out.

AFR SENSOR BANG

Equipped with a AFR sensor bang after the merge collector. Hassle free on hooking up an AFR monitoring device which is a vital to keep the engine in a good condition.

GASKET KIT INCLUDED

Comes with every gasket required for installation.

COMPARISON
